More coming soon!

# Benjamin Thvedt

## Web Developer

I have been making websites and web apps for over 10 years. I'm looking for a role that can use my skills! I'm also increasingly interested in AI and its role in business (but still learning).

## Experience

**August Ash** April 2024 - June 2025

### Web Developer

I had a nice time here but due to recent business slowdowns I'm seeking a new role. I am happy to provide references if requested, and am open to pivoting if needed!

- Provided Drupal and WordPress support for high-profile regional sites including MSP Airport and Kowalski's.
- Maintained and enhanced custom full-stack codebases ranging from legacy to newly built ones.
- Collaborated directly with clients to troubleshoot issues, find solutions, and develop new features.

**Self-Employed** Aug 2020 - Sept 2023

### React/Vue Developer

I worked with former colleagues from Allen Interactions to develop interactive e-learning experiences using Vue and React. It was a fun gig for those post Covid years.

- Worked closely with instructional designers and content writers to bring their visions to life in custom interactive e-learning modules.
- Developed an editing platform in React that empowered instructional designers to update text in real-time with the custom Vue-based modules, which streamlined workflows during the inevitable numerous content revisions.

**Robert Half** Sept 2019 - April 2020

### Web Developer

Worked with a range of clients for various small to mid-sized projects. Then Covid happened, but I still picked up valuable skills and experience during my time here.

- Supported a variety of on-site projects, utilizing a wide technical skill including full stack development with Typscript and Node.js, styling, and SQL work.

**Allen Interactions** Jan 2018 - July 2019

### Vue Developer

Developed interactive e-learning courses using Vue.js to assist the company with their efforts to migrate away from Flash based browser content.

- My first real coding gig. Learned "modern" frontend frameworks!
